

## How to install colorFabb filament presets and settings on Windows

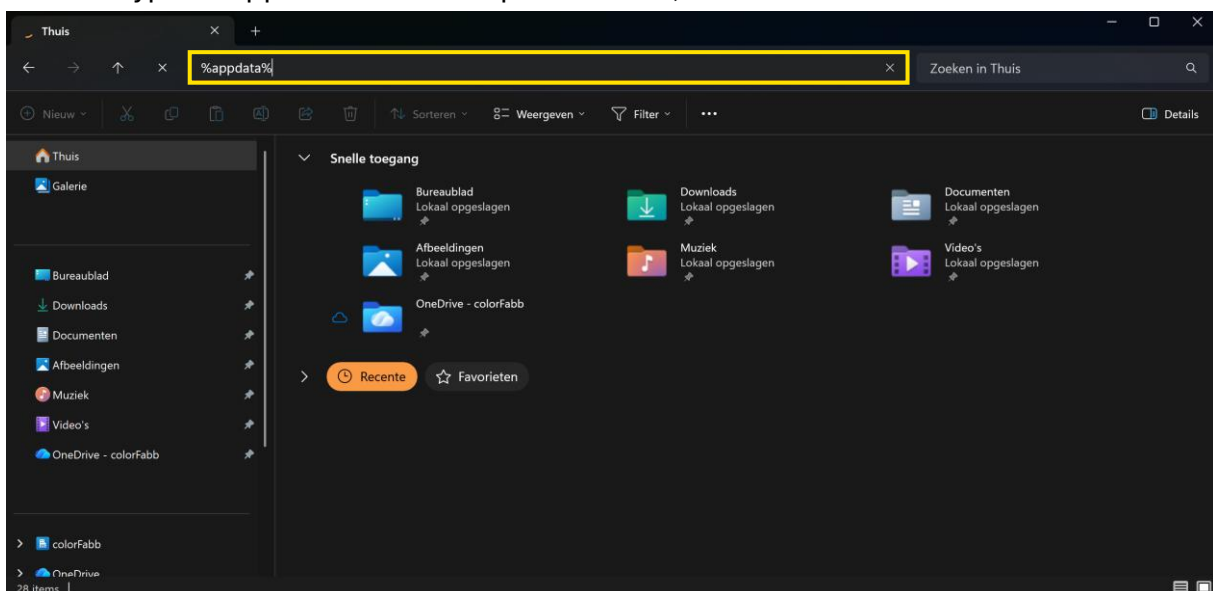

**STEP 1:** Download the presets for your slicer.

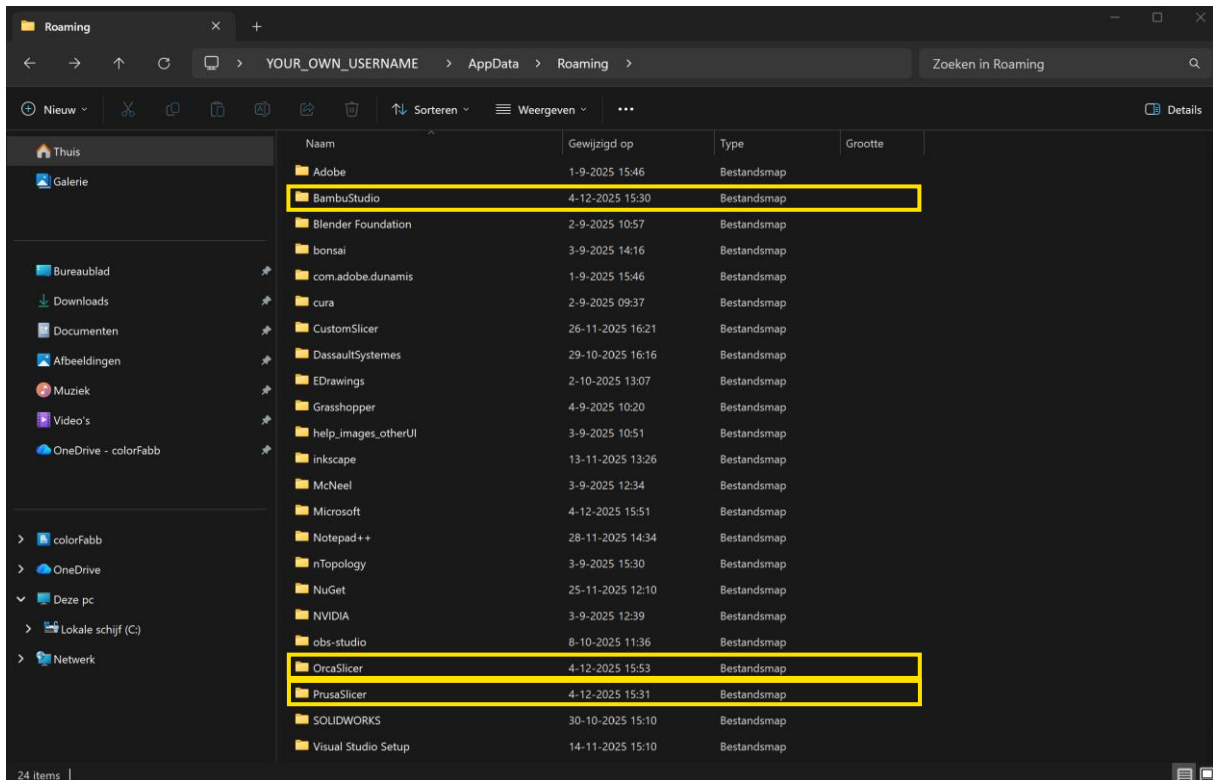

**STEP 2:** Open file explorer.

**STEP 3:** Type “%appdata%” in the top search-bar, and hit enter.

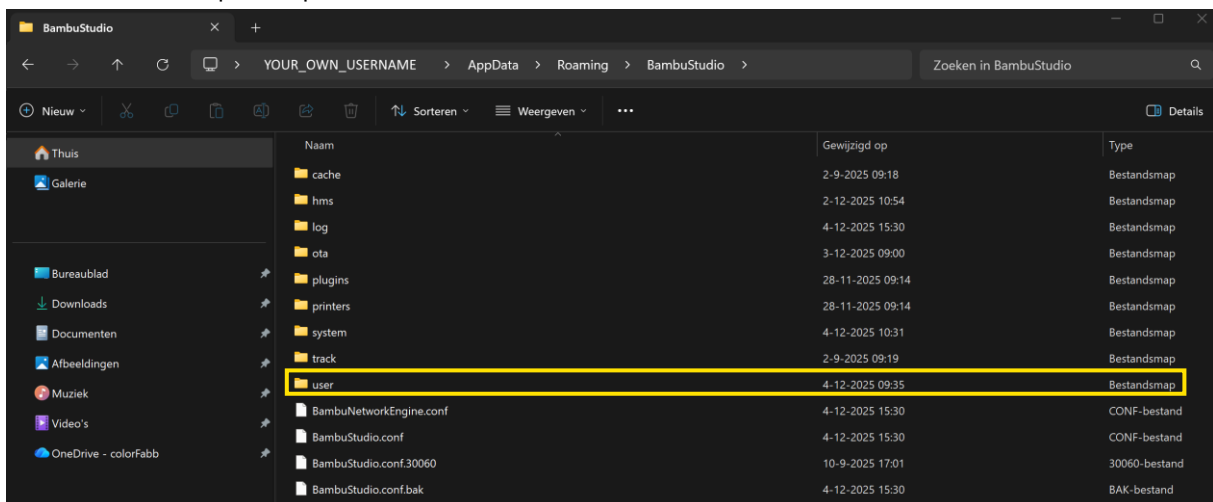

**Step 4:** Open the folder with your slicers name.

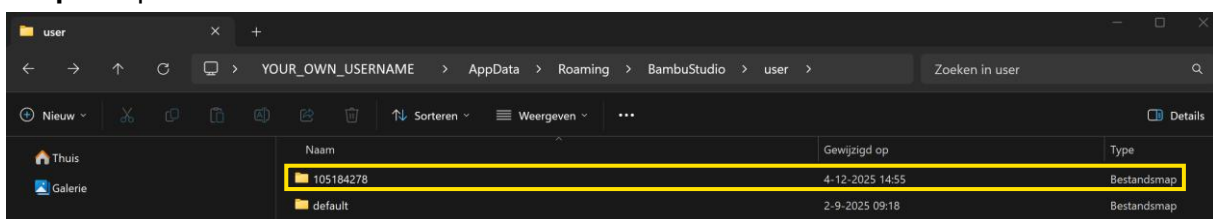

Currently only BambuStudio, OrcaSlicer and PrusaSlicer are supported.

**Step 5:** For BambuStudio and OrcaSlicer open the user folder.

For PrusaSlicer skip to step 7.

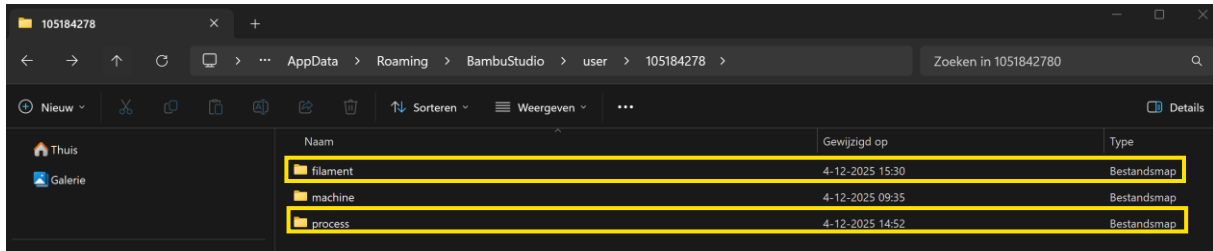

**Step 6:** Open the folder with a numeric name

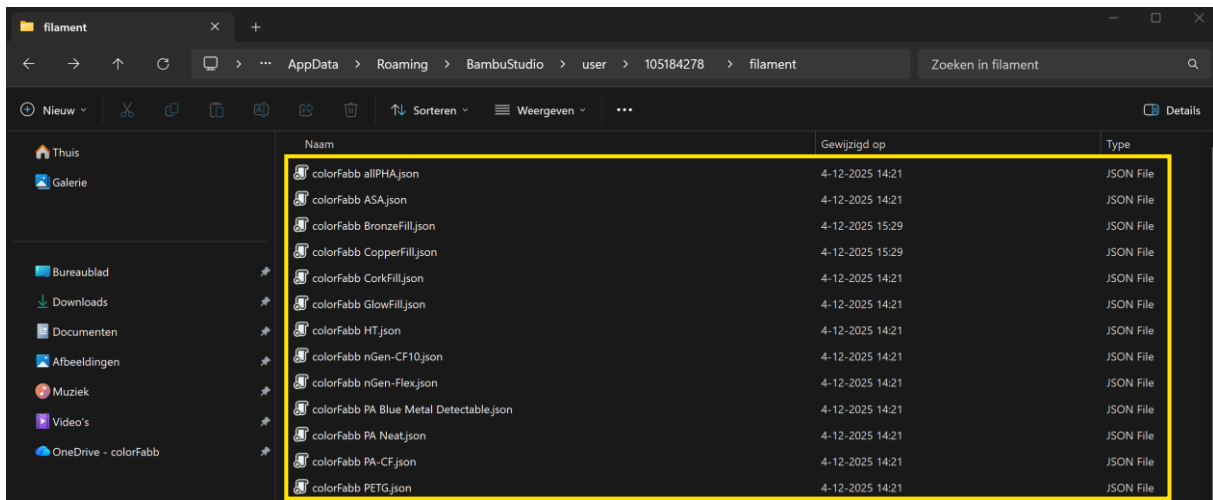

If there are multiple numerically named folders, repeat the next steps for all these folders!

**Step 7:** Open either the filament folder for filament presets, or the process folder for print-settings

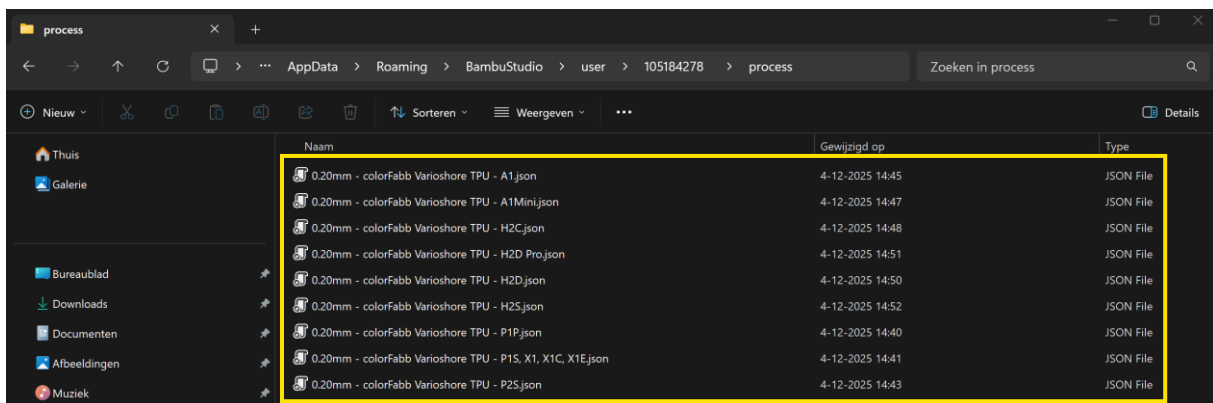

On PrusaSlicer the folder for print-settings is called “print”

**Step 8:** Place the downloaded profiles into the correct folders

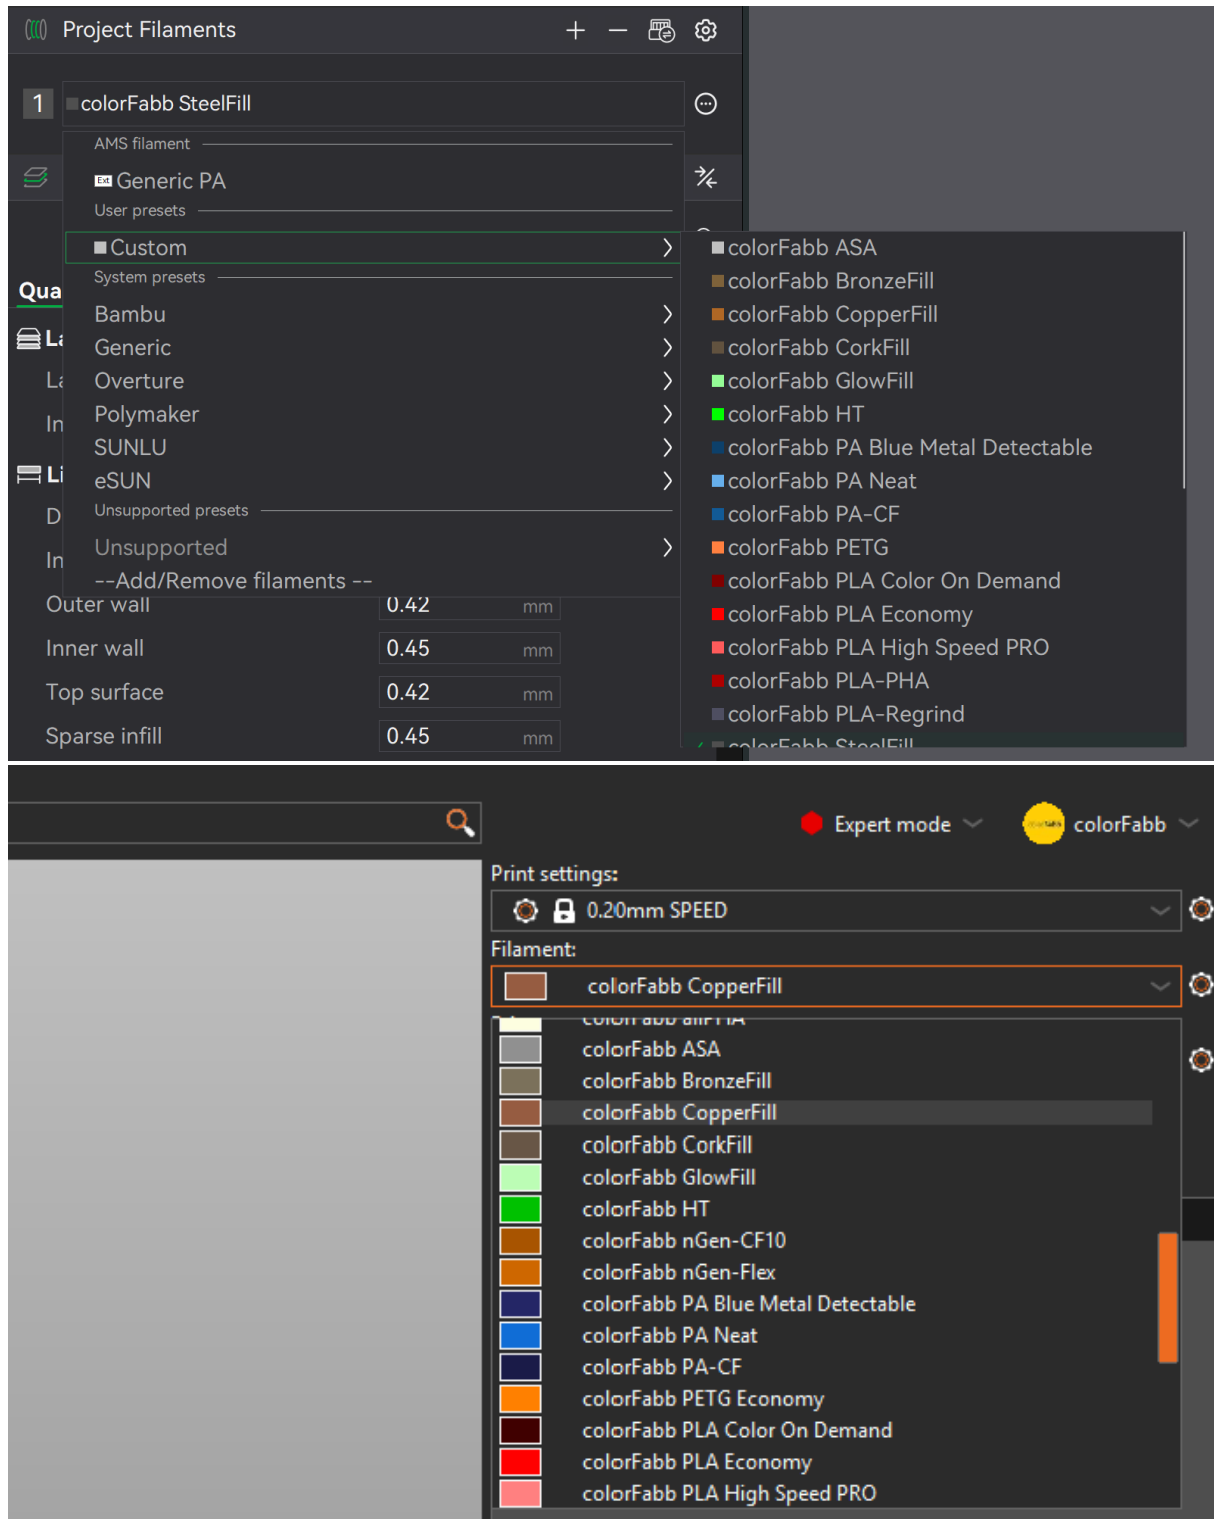

This is the filament folder

This is the process/print folder for the settings.

**Step 9:** The profiles should now be installed correctly, happy printing!
